Development Activity Highlights and Five-Year Forecast (2008-2013)

I. PURPOSE

The *Development Activity Highlights and Five-Year Forecast (2008-2013)* is a report issued annually by the Department of Planning, Building and Code Enforcement. The report serves several functions. First, the report assists the Office of the City Manager in estimating future construction-related tax revenues that generate funds for the City's Capital Improvement Program. Second, the report provides City policymakers and staff with key data for periodic assessment of the rate, type, and location of development activity in San Jose. Lastly, the report is a tool for distributing information on major development projects to members of the general public.

II. SUMMARY

Development activity levels are presently undergoing a sharp reversal of the trends that had held throughout this decade. Residential construction levels, which remained steady during and beyond the last recession in 2001, are faltering in the face of economic challenges more specific to the housing sector and potentially more severe and widespread than those experienced during the "dot com bust". In contrast, non-residential construction is now rebounding to levels not seen since that time. In the short term, this concurrent "rise and fall" of activity should yield an overall flat building permit valuation of \$875 million in fiscal year 2007/08—a dip of just 3% from the prior year. However, due to expectations for modest improvement in residential activity in the years ahead, permit valuation is forecast to rise and hover around the \$1 billion mark over the remainder of the five-year forecast period. The following summary discusses current development activity and trends for each major land use category (residential, commercial, and industrial), providing some insight as to what may occur over the forecast period (2008-2013).

Residential Development

- *New housing production in San Jose exceeded 4,000 dwelling units per year during the late-1990's, and then declined to an average of 3,000 units per year from 2001-2007. However, production by unit type (i.e., single-family vs. multi-family) varied considerably over this time. Most recently, single-family construction fell 33% to a 17-year low during fiscal year 2006/07, whereas multi-family activity surged over 50% to a 4-year high. In total, building permits were issued for 3,214 units, just above the staff forecast (3,000 units).*
- *Staff forecasts that residential construction activity will rapidly decelerate in the near term, as declining home prices, rising unsold inventory, the ongoing*

"credit crunch", and a growing threat of recession all weigh heavily on the housing industry. As such, the number of new dwelling units is expected to reach just 1,750 units in fiscal year 2007/08—a 45% year-over-year decline and a 15-year low.

- *Following a short-term slowdown, staff anticipates that residential construction activity in San Jose will return to more normal, long-term levels, reaching a moderate rate of 2,750 units per year over the five-year forecast period. This forecast improvement is based on a significant unmet regional demand for housing, as evidenced by extraordinary strength in current development application and entitlement activity, which has already set a 10-year high in fiscal year 2007/08. Future development will consist primarily of higher density housing in strategic infill locations, including the Greater Downtown area, North San Jose, and Specific Plan areas. The development trend of mid-rise or high-rise housing in Downtown and North San Jose is well underway, with more than half a dozen projects in each area currently under review or construction.*

Commercial Development

- *After a five-year-long boom in commercial construction activity that spanned the late-1990's to early 2000's, at which time total permit valuation averaged over \$500 million per year, activity since 2003 has consistently amounted to less than half that level. Further, activity in recent years has been comprised almost exclusively of retail projects, including major renovation/expansion of the Oakridge and Eastridge shopping centers, redevelopment of Plaza de San Jose (at Story and King Roads), and construction of San Jose Marketcenter (at Coleman Avenue and West Taylor Street). In fiscal year 2006/07, commercial permit valuation amounted to just \$214 million, well below the staff forecast of \$275 million.*
- *Staff forecasts that commercial construction activity will reach a 6-year high during fiscal year 2007/08, with total permit valuation amounting to \$350 million. In contrast to the past dominance of retail (noted above), this activity level will be driven by resurgence in office construction. Specifically, Legacy Partners' recent groundbreakings on its Riverpark Towers and America Center projects (in Downtown and along Highway 237, respectively), coupled with BEA Systems' occupancy of the long-vacant "Sobrato building", have in fact already pushed year-to-date valuation to over three-quarters of this forecast figure.*
- *For the five-year forecast period, overall commercial construction activity is expected to be moderate and stable. A prime example of the continuing health of retail is the recently approved major expansion of Valley Fair Shopping*

Center that would make it the largest shopping mall in the Bay Area. Additional development is expected in Greater Downtown and North San Jose in support of new housing growth in these areas. This trend is evidenced by a Whole Foods Market planned immediately adjacent to residential redevelopment (per the Midtown Specific Plan) along The Alameda.

Industrial Development

- *Like its commercial counterpart, industrial construction activity nearly reached an astonishing \$500 million per year in permit valuation over the five-year period of 1997-2001. Since that time, however, activity has registered just a small fraction of that figure, reaching a low point under \$100 million per year in the two years immediately following the dot com bust. By comparison, the activity in fiscal year 2006/07, totaling \$235 million, fell in a relatively moderate range in-line with the staff forecast (\$225 million). At the same time, tenant improvements were quite robust, eclipsing last year's respectable total by 13% and setting a 6-year high, double the level just a few years earlier.*
- *Staff forecasts that industrial construction activity will remain moderate during fiscal year 2007/08, with total permit valuation once again estimated to reach \$225 million. Most notably, Cadence Design Systems is in the midst of construction of a five-story, 208,000-square foot building at its headquarters on Montague Expressway. And just about 1.5 miles due east of Cadence, within the International Business Park, several major tenant improvement projects are underway, including the complete renovation and seismic upgrade of an 80,000-square foot BD Biosciences facility on Qume Drive.*
- *Activity levels for industrial construction will likely remain modest over the forecast period. Various concerns, including slowing employment growth, high energy costs, and waning business and consumer confidence have placed a cloud of uncertainty over the prospects for near-term expansion of industrial space. Until this cloud begins to dissipate, property owners are unlikely to venture much beyond relatively limited investments in existing buildings.*

III. FIVE-YEAR FORECAST (2008-2013)

The Department of Planning, Building and Code Enforcement's five-year forecast of development activity is summarized in Tables 1 and 2 (next page). Construction is expected to remain flat during fiscal year 2007/08 at \$875 million in total permit valuation, and then rise modestly to approximately \$1 billion in future forecast years.

Data on non-residential square footage estimated based on construction valuation in the Building Division's *Permit Fee Activity Report*.

IV. CONSTRUCTION TAXES AND EXEMPTIONS

The City of San Jose imposes a series of construction-related taxes that are generally used to finance the construction and improvement of facilities and infrastructure systems that provide capacity beyond the needs attributed to a particular development. These taxes are in addition to cost-recovery fees charged for processing and reviewing applications for development approvals and permits. The largest construction-related tax revenue sources are described below.

Building and Structure Construction Tax

The Building and Structure Construction Tax is imposed upon the construction, repair, or improvement of any building or structure where a building permit is required (except for authorized exemptions- see below). The proceeds from this tax are restricted in use to the provision of traffic capital improvements on major arterials and collectors, the acquisition of lands and interest in land, and the construction, reconstruction, replacement, widening, modification and alteration (but not maintenance) of City streets.

Construction Excise Tax

The Construction Excise Tax is imposed upon construction, alteration, repair, or improvement of any residential or commercial structure (except for authorized exemptions- see below). The tax does not apply to industrial development. This is a general purpose tax that may be used for any “usual current expenses” of the City. The City Council has historically used the majority of these funds for traffic infrastructure improvements.

Residential Construction Tax

The Residential Construction Tax is imposed upon any construction of a one-family dwelling unit or multi-family units or any mobile home lot in the City. This tax is collected and placed in a fund used to reimburse private entities that have constructed a portion of an arterial street that is wider than what is normally required in connection with residential development. The funds are also used to construct median landscaping and other street improvements.

Exemptions

Certain construction-related tax exemptions are provided in San Jose. These exemptions apply only in certain areas and/or to certain types of land uses, and are generally designed to accomplish one of the following objectives:

1. Reduce the economic constraints involved in the development of housing in high risk areas and/or housing for very-low income households;

2. Implement a separately administered funding arrangement that finances infrastructure and public service needs in an area only with revenue generated by development in such area (e.g., Evergreen Specific Plan Area); and,
3. Provide exemptions required by State or Federal law (e.g., hospitals, churches).

Planning staff estimates that \$100 million in construction valuation will be exempted each year over the forecast period, or approximately 10% of total valuation during this time (see Table 1 on page 4).

V. MAJOR DEVELOPMENT ACTIVITY DATA

Planning staff has collected a significant amount of data on development activity, which is the foundation for the five-year forecast contained in Section III of this report. These data focus on recent “major” projects with the highest likelihood to have the most significant impact on the forecast. Major projects are defined as residential projects greater than 50 dwelling units, commercial projects greater than 25,000 square feet, and industrial projects greater than 75,000 square feet. This data collection effort has identified approximately 35,000 dwelling units and 17 million square feet of non-residential space submitted for Planning approval since January 1, 2004.

The development activity data on the following pages is first divided into three major land use categories-- residential, commercial, and industrial. Then, individual projects are divided into four subcategories based on project status-- projects completed, projects under construction, approved projects (construction not yet commenced), and projects pending City approval.

VI. MAJOR DEVELOPMENT ACTIVITY MAPS (PLANNING AREAS)

San Jose is divided into a total of fifteen (15) planning areas (see Figure 1, below). The individual planning area maps that follow include projects in all status categories submitted since January 1, 2004. These maps can be used in conjunction with the data contained in Section V of this report to allow closer analysis of the rate, type, and location of major development activity in the City. (Note: map exhibits are not provided for the Almaden, San Felipe, or Calero planning areas as no major development activity occurred there and/or these areas are outside the City's Urban Service Area and Urban Growth Boundary).

2 Whole Foods Market

Total Commercial Sq.Ft.= 73,000

Edenvale Planning Area Major Development Activity

Coyote Planning Area Major Development Activity

 **Commercial Projects**

1 Heritage Oaks Cemetery

Total Commercial Sq.Ft.= 380,000

VII. APPENDIX: SOURCES

The Department of Planning, Building and Code Enforcement utilized a variety of information sources in the preparation of this report. These sources are described below.

Data Collection and Analysis

The Department's development project database was the primary initial resource for information on applications submitted to the City. Spreadsheets and Geographic Information Systems (GIS) were also used to manage and display this empirical information in a format that was more readily comprehended. Architectural drawings, aerial photographs, and fieldwork were also used to evaluate site-specific issues that could have affected the anticipated cost or timing of a project's construction.

Planning staff conducted and/or participated in a series of interviews/discussions with a variety of persons, including City staff processing development applications, developers or their representatives, and others working in the development industry or related fields, such as the City's Office of Economic Development and Redevelopment Agency. These discussions surfaced important information on specific development projects as well as provided a forum for review of the economic assumptions underlying the report's five-year forecast.

Review of Publications

Planning staff consulted several publications that made an important contribution to the preparation of this report, including: San Jose Business Journal and San Jose Mercury News (various articles), the Silicon Valley Leadership Group's *Projections 2008*, Joint Venture Silicon Valley Network's *2008 Index of Silicon Valley*, the Association of Bay Area Governments' (ABAG) *Projections 2007* and *Regional Economic Outlook 2008-09*, Marcus & Millichap's *Market Research Reports* (periodic), RealFacts' *Residential Market Reports* (periodic), and Commercial Property Service's (CPS) *RealNews* (quarterly).
